

## **HDT VL AERO (Turbo)**

As featured in Holden Performance 1, and Perth Street Car Vol 19. No.4 Magazines, this Tuxedo Black HDT VL AERO is a truly unique vehicle. Originally starting its life as at BT1 Pursuit vehicle for the New South Wales police constabulary, it was subsequently enhanced by Just Commodores in Sydney post tour of duty, then HDT Sydney in 1994 for birthright tags and up-specification to AERO specs. It is the only known HDT tagged / BT1 plated vehicle.

The current owner has painstakingly created a truly unique vehicle with a meticulous attention to detail rebuild and customisation including onboard SatNav, prototype digital in-dash speedometer, prototype discreet shift light and gear indicator and HUD speedo for racetrack duties (all easily reversible if required to take car back to stock). Coupled with a custom, state of the art 40,000 song sound library, 10" vision screen, and security system, this vehicle is ready to cruise and turn heads. The ECU has been tuned for street work and the intercooled turbo engine produces more Kw than a standard VL Walkinshaw at this time. Enthusiasts know what these engines are capable of and the ECU can be re-programmed for race day and quarter mile outings if required with proper equipment via USB cable.

The interior is "as new" and in excellent concourse condition with safety features such as fire extinguisher and first aid kit. This has been a no expense spared, as much new old stock parts (NOS) restoration and customisation, labour of love project spanning 18 years and needs a new home. External accessories such as fitted car cover, Thatcham CAT 3 steering wheel lock (also known as "the steering lock from hell") and show day sandwich display board included in sale.

There is nothing to spend on this show car ready and quality vehicle, except your time enjoying driving it with your family or mates.
